

# PARTTIME-ICT

In our group project we made a design for the website of Fontys parttime for this we did a few interviews. In my portfolio I linked one interview [HERE](#). With these interviews we made a design for the Fontys website. [HERE](#) you see the Figma file (design 1).

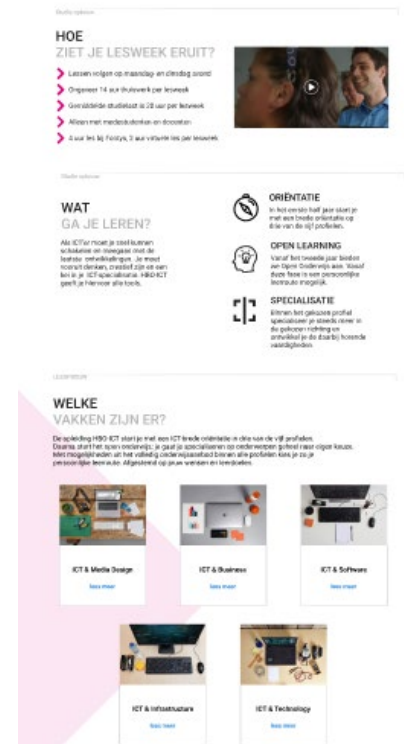

For the development assignment we made the design into a website.

So, we first checked if the design we made in the previous assignment was good. So we did some interviews which you can see [HERE](#). Based on this we came up with the following design choices. For the outcome of these interviews we made a iteration which you can see in the same [Figma file](#) (iteration 1).

## Iteration 1

We also put the “vakken” section, the “lesweek” section and the “wat ga je leren” section. In the “studieopbouw” navigation button because this all is about how the study is built and what you will in a study week.

Then we made another change, we put the admission rules for speed-students in the “toelating” section instead of the “over” section this was for many people more logical because when you want to know if you can speed up the study you will mostly search for it in the “toelating” section.

## Iteration 2

After these changes we went to a UX expert and asked him what he thought of the design, he told us that the “leerwijze” section was still a bit unclear and that if you scroll down on the page the call to action for the open days is no longer visible.

So we edited the navigation to make it more logical, this is what you see in iteration 2.

Here we removed the leerwijze button because this was a bit of a vague button, and it was very unclear what information was given here.

We also swapped the “contact” button for “open Dag” because for awareness the open Dag is more important than the contact button. And when people want to contact Fontys they will automatically scroll down or search for contact information on google.

For the last iteration I made an interactive prototype with the menu and the buttons in the “toelatingseisen” section. And I made a mobile design here we didn’t spend too much attention to we took the design of the desktop webpage and made it smaller to fit on the phone and we made a hamburger menu for the navigation.

## Easter Egg

For the assignment we made an easter egg and in the previous assignment we created a persona for the ICT part-time study. We made Kees, and because of the fact that Kees likes cyber security and his hobby is gaming, we made the following easter egg.

**Kees Mechelen**  
Software Designer

Leeftijd: 32 jaar	Woonplaats: Eindhoven
Geslacht: Man	Opleiding: MBO
Gezinsituatie: Ongetrouwd	Baan: Software tester

### KARAKTER

Kees is een methodische werknemer met veel ambitie. Hij zoekt altijd voor manieren om zich verder te ontwikkelen. Hij houdt van gamen en eten met zijn familie en vrienden.

### DOELEN EN UITKOMSTEN

- Vaardigheden verbeteren
- Diploma halen
- Salaris verhogen
- Carrière bouwen

### PERSOONLIJKHEID

### SITUATIE

Heeft interesse in cyber security, wil graag meer kennis en wil in een andere richting gaan met zijn carrière. Dus hij de deeltijd opleiding ICT op Fontys.

### SOCIAL MEDIA

### VAARDIGHEDEN

### HOBBIES

- Over
- Studieopbouw
- Toelating
- Kosten
- Open dag
- Aanmelden

- Stap 1: Meld je aan via studielink
- Stap 2: Machtig de betaling van je collegegeld.
- Optionele stap: Doe de studiekeuzecheck.

#### INFORMATIE

Email: fontysictpro@fontys.nl

Telefoon: +0885074339

When you scroll down on the page. You get a terminal. With a message

*“Hey, you, I dont have much time, can you get me into the easterEgg directory?”*

Then when you type “`cd easterEgg`” you will get this message:

*“Thanks, ill slide you a little something as a reward. Give this code to the desk over there at TQ: F1ndM3 . Gotta run ;]”*

*Oh and before i go, there should be one more piece of value on this site. I cant figure it out, something about arcade games?”*

Hey, you, I dont have much time, can you get me into the easterEgg directory?

In the message you see that there is another game/thing you can do. If you scroll up and do the Konami code on your keyboard you will get a pop-up.

If you don't know the Konami code:

Up → up → down → down → left → right → left → right → b → a → "start"\*

\*(you don't have to do the start because there isn't a start button)

Both of these small assignments give you a reward and the idea is that the user (Kees) can go to the service desk of Fontys and get a small reward in return of finding the easter egg.
